IRT Series Power Connectors

Connection of power cables in rolling stock is a critical application.

Beyond specific parameters like voltage, current, or watertight sealing, other application requirements must be considered: environment and operating conditions, robustness, handling, and other customer specifications.

The IRT connector series is one of the most popular connection systems used around the world, and is able to satisfy all of the common parameters from different railway authorities.

Glenair is able to develop customized connectors for specific applications, certifying the products according to your unique requirements.

Application

To select the right IRT interconnection system, consider the following parameters:

Electrical Data:

- Working Voltage
- Working Current and Max Current applicable
- Frequency
- Insulation Resistance

Mechanical Data:

- Mating Cycles requested
- Area where the connection is located

Glenair Power Connectors Introduction

IRT
Connectors

Environmental Data:

- Working Temperature
- Shock and Vibration
- Water Ingress Protection
- Corrosion Resistance
- Applicable Specs

The Cable's choice is strictly related to the above data. Square section, outer diameter of the conductor and the isolator are necessary to define contact characteristics and connector accessory specifications in order to guarantee watertightness and clamp strength.

The cable chosen defines:

- Type of contact (cable's section – power conductor)
- Type of connector (working voltage – number of contacts)
- Type of clamp (external diameter of the connector – setting in the application)

A

A schematic of the basic characteristics of the Power connectors can be a useful guide in the passage from the wires to the connector.

Connector Series	Contacts Number				Cable Section
	1	2	3	4	
UJ Connectors	X	X	X		10 - 240 mmq (AWG8 - 444MCM)
ITS 500 Connectors	X	X	X		95 - 240 mmq (AWG3/0 - 535MCM)
ITS 901 Connectors		X	X	X	35 - 120 mmq (AWG4 - 262MCM)
IRT Connectors			X	X	35 - 185 mmq (AWG4 - 373MCM)

Glenair is here to help you choose catalog parts for your application, or to design a specific solution to your unique power connector application.

Worldwide Applications

Los Angeles Metro: Transportation for a City in Motion

A Los Angeles, California is the second most populous city in the United States, and is a world center of business, international trade, entertainment, culture, media, fashion, science, technology, and education. Los Angeles has been ranked the third richest city and fifth most powerful and influential city in the world, behind only New York City in the U.S.

With some 38 million residents living and working in L.A., The Los Angeles Metropolitan Transit Authority (Metro) has the formidable task of helping people get around the busy city. The Metro Rail System opened in 1990, and now comprises five lines, including two heavy rail subway lines and three light rail lines totalling 79.1 miles (127.3 km) of rail, 70 stations, and over 350,000 daily weekday boardings as of September 2010.

Metro's heavy gauge subway trains are A650's built by AnsaldoBreda in Italy. They utilize standard gauge track and are powered by third rail to General Electric traction motors, and typically run in six-car consists.

A650s are equipped with a host of state-of-the-art features for safety, efficiency, and passenger comfort, including automatic train control, air conditioning, emergency intercoms, wheelchair spaces and emergency braking. Each A650 is equipped with 4 abreast style (club) seating, maps of the line, bike racks, P.A. and climate control. In the operators panel, there is a combined power handle for throttle and dynamic braking.

A Metro Red Line train departing from the Wilshire/Vermont Station

Whether you're commuting to work in Los Angeles' Downtown financial district, or enjoying L.A.'s thriving nightlife on a night out at Universal CityWalk, the Metro can take you there. Glenair connectors and interconnect systems are integral to the AnsaldoBreda A650 subway train that keeps Los Angeles in motion with modern style and efficiency.

The Metro Los Angeles subway train cars are manufactured by AnsaldoBreda.

IRT Series Rectangular Multi Pole Power Connector Technical Characteristics

The Glenair IRT series is a rectangular power connector for harsh environmental conditions. Available with three, four and six contacts, typical for traction motor applications. Suitable for single cables AWG 4 – 373MCM (35 to 185 mm²). Working voltage up to 3000 Vcc.

Two mating systems offered:

- Screws, for light weight and reduced dimensions
- Lever system with secondary lock, easy to use in difficult positions.

The IRT Series is suitable for separated power cables, with or without screen, ground body available with a copper plait (not supplied with the connector).

Available with three different cable backend styles:

- Metallic Gland
- Clamp with Strain Relief
- Screen EMC Gland

IRT series connectors meet the most important rail requirements and specifications.

Application Notes:

- Receptacle with screen EMC gland and dumpers, for bogie applications. RoHs compliant.
- Working voltage: 3000 Vac.
- Test voltage: 12000 Vac.
- Water proof: IP67 level (coupled connectors).
- Contact resistance: 0.3 mΩ max.
- Temperature range: -55 to +125°C.
- Contact: copper alloy silver plating.
- Insulator: UL94V0-NFF16-102:I2F1 (exigency 4).
- Shell: Aluminium alloy with conductive black plating.
- Clearance in air: 26.8 mm Min.
- Creepage distance: 26.8 mm Min.

TECHNICAL CHARACTERISTICS

- 8 socket crimp contacts:
- 6 size 1/0 contacts with buckets for 50 mm² (interlock - backwarded)
- starting current rating : 180A (for 30 sec. every 2min.)
- working current : Size 1/0 = 150 A at 80°C - Size 16 = 13 A at 80°C
- working voltage : 1'500 Vac / 50 Hz
- test voltage: 4'500 Vac / 50Hz
- working temperature: (-55 to +125)°C
- IP rating (coupled connector): IP67
- weight: 2.5 kg

MATERIAL AND PROTECTION PLATING

Contacts: copper alloy with silver plating (G10)
Inserts: polychloroprene rubber
Gaskets: polychloroprene rubber and silicone
Body: aluminium alloy
- electrodeposition of black paint (F6) (cataphoresis)
RoHS compliant
Latch: stainless steel
Screws and others: stainless steel

WARNINGS

WARNING

FAILURE TO FOLLOW THESE INSTRUCTIONS MAY RESULT IN DAMAGE TO EQUIPMENT, SERIOUS PERSONAL INJURY OR EVEN DEATH.

It is the user's responsibility to ensure these products are used safely. Glenair, Inc., including all Glenair, Inc. subsidiaries, is NOT responsible for damage to equipment, personal injury or death from use of Glenair, Inc. products.

Only qualified electrical technicians should use interconnection products in high voltage and other electrical conditions.

Interconnection products must be clean and dry when installed. Mating and de-mating should never occur under load.

Damaged interconnection products must be replaced immediately by a trained electrical technician.

Glenair, Inc. reserves the right to modify this Warning, any other warning, all catalogs, glenair.com website, and any other technical information with or without notice.

For further information and technical assistance, please contact your local Glenair Sales Office or see our website: **www.glenair.com**

TSR: Trains for Regional Service

Glenair is a primary supplier of Interconnect components and systems for Trains for Regional Service (TSR) in Italy. Designed and manufactured in cooperation with AnsaldoBreda and Keller, TSRs are double-deck Electric Multiple Unit trains with distributed power, consisting of two MCH motor coaches with driver's cabs and one or more intermediate motor coaches.

The TSR Train cars manufactured in cooperation by AnsaldoBreda and Keller.

The traction unit's composition can be varied from 3 to 6 motor coaches to maintain constant performance. Two or more traction units can be coupled and remote controlled, up to 12 motor coaches. The installation of the train's furnishings allows easy modification of the seat layout, and the ability to substitute seats with a baggage compartment, folding seats, or lockers.

An IGBT traction inverter is installed in each motor coach. Each of these water-cooled inverters feeds two three-phase asynchronous motors. Furthermore, two static groups (3 kV DC/380 V AC 50 Hz) for auxiliary services, each equipped with a battery charger, are installed on the train. Every TSR is equipped with mechanical disc braking on each axle and regenerative electric braking, with reserve rheostat, on each motor axle.

SEPTA Explores Energy-saving Technologies

Southeastern Pennsylvania Transportation Authority (SEPTA) is exploring ways of saving million of dollars by taking advantage of the latest energy storage technologies. The project is focusing on Philadelphia's Market - Frankford subway line, where the fleet of M-4 trains is already equipped with regenerative braking. "Smart Grid" technology will allow SEPTA to capture and store braking energy in large-scale batteries. This recovered energy can then be reused on the network, improving power quality, or fed back to the grid to generate additional revenue for SEPTA.

The new SEPTA train manufactured by Amtrak.

This energy-saving technology is also expected to reduce carbon emission by 1250 tons per year. The joint project between Viridity Energy and SEPTA is being supported by a \$900,000.00 grant from the State of Pennsylvania. If the pilot is successful, the technology could be deployed elsewhere on all the SEPTA network—the Regional Rail Division that provides commuter rail service on thirteen branches to over 150 active stations in Philadelphia, Pennsylvania and its suburbs.

Glenair is one of the main suppliers of Interconnection Systems and Connectors for this advanced, energy saving train.

ITS 901 Series Reverse Bayonet Multi Pole Power Connector Technical Characteristics

ITS 901 Series is the extension of the ITS Reverse Bayonet connector family, for power cables over AWG 1/0.

Suitable for harsh environmental conditions, 901 Series Connectors accept cable from AWG 4 to 262 MCM (35 - 120 mm²), for current up to 450 Amp.

Working voltage: 800 - 1000 Vac.

Available for single wires and multipole jacketed cables, with cable clamp or conduit.

Male contacts with Finger Test Protection, Load Side (Receptacle or Plug).

Long bayonet ramps, three polarization keys and rubber recovered coupling facilitate mating and unmating operations.

901 Series meet the most important rail requirements and specifications:

- Salt Spray Test Corrosion: 500 hours;
- 500 Mating Cycles;
- Shock and Vibrations for Under-Car and Car-To-Car Applications;
- IP67 Sealing (Coupled Connectors);
- Fire Resistant and RoHS Compliant Materials.

Straight Cylindrical Plug with Rubber Recovered Coupling Assembly for Jacketed Cable

TABLE 3: MODIFICATION CODES

Name	Modification
Omitted	Standard
B0	Connector Less Contacts
F7	Conductive Black Plating
MXX	Modified Contacts M3A, M3B and M3C for 3 Contacts Type M4A, M4B and M4C for 4 Contacts Type

Application Notes:

- Straight Plug with backshell for jacketed cable with rubber recovered coupling. RoHS Compliant.
- Working voltage: 800-1000 Vac. Test voltage: 2800 - 3800 Vac 50Hz (1 min.). See Table 1 - Inserts.
- Water proof : IP67 level (coupled connectors).
- Contact resistance: 0.2 to 0.5 mΩ Max.
- Temperature range: -55 +125°C.
- Contact: copper alloy with silver plating.
- Insulator: black thermoplastic resin according with UL94V0-NFF16-102 I1 F2 (Exigency 3).
- Shells: Aluminium alloy with electrodeposited black paint.

Security Instructions**

WARNING

**FAILURE TO FOLLOW THESE INSTRUCTIONS MAY RESULT IN DAMAGE TO EQUIPMENT,
SERIOUS PERSONAL INJURY OR EVEN DEATH.**

It is the user's responsibility to ensure these products are used safely. Glenair, Inc., including all Glenair, Inc. subsidiaries, is NOT responsible for damage to equipment, personal injury or death from use of Glenair, Inc. products.

Only qualified electrical technicians should use interconnection products in high voltage and other electrical conditions.

Interconnection products must be clean and dry when installed. Mating and de-mating should never occur under load.

Damaged interconnection products must be replaced immediately by a trained electrical technician.

Glenair, Inc. reserves the right to modify this Warning, any other warning, all catalogs, glenair.com website, and any other technical information with or without notice.

For further information and technical assistance, please contact your local Glenair Sales Office or see our website: **www.glenair.com**

Big Apple Subway: New York calls Glenair

Glenair is proud to be one of the main suppliers of connectors and interconnect systems for New York City Transit Authority's new R160 subway cars.

An R160 subway car, manufactured by Alstom Transportation and Kawasaki Heavy Industries.

Equipped with the latest control system, HVAC, and public address system to guarantee the utmost safety and passenger comfort, The R160 is a class of 1,662 subway cars built by two different companies: Alstom Transportation and Kawasaki Heavy Industries. Because the cars were built by two manufacturers, they are designated "R160A" and "R160B," even though the two are almost identical.

Kawasaki and Alstom organized a joint venture for project management, engineering and equipment purchasing to pursue the contract. The two companies built and delivered the rolling stock through the joint venture. Kawasaki not only manufactured 260 cars for the base contract, but was also the engineering leader for the whole project.

Alstom assembled 1,002 R160A cars at its manufacturing plant in Hornell, New York, while Kawasaki assembled 660 R160B cars at its plant in Yonkers, New York.

The new AlsaldoBreda/Firema Meneghino train for Milan, Italy

The Meneghino is a new six-car dual-voltage train for the *Metropolitana Milanese* (Milan underground). It belongs to the "MNG" (*Metropolitana di Nuova Generazione* or *Metro New Generation*) family. The MNG is designed and manufactured in cooperation with Ansaldo Breda, a premier Italian rail transport and engineering company. Each train is built with two identical traction units, in the "Rp-M-M" configuration: Each unit includes one trailer coach (Rp) equipped with a driver's cab, and two intermediate motor coaches (M) without a driver's cab.

The new AlsaldoBreda/Firema Meneghino train for Milan, Italy

The electrically - controlled passenger doors (8 on each coach) grant a high reliability standard and very low maintenance. The train is equipped with a highly advanced Passengers' Audio/ Video Information System. With this system, passengers receive informational messages and video regarding train service, broadcast directly to LCD monitors in each compartment.

Glenair is a major contributor of connectors and interconnect systems for this advanced metropolitan train.

ITS 500 Series

Reverse Bayonet Single Pole Power Connector

Technical Characteristics

ITS 500 Series derives from an important Military Specification for Power Connectors: VG96929. Suitable for harsh environmental conditions, ITS 500 accepts cable gauges AWG 3/0 to 444MCM (95-240 mmq), for current up to 750 Amp.

Special insulator drawing allows high working voltage, up to 3000 Vcc.

Suitable for jacketed cables, with or without conduit protection.

Receptacle with finger protection (Load side).

ITS 500 meets the most important rail requirements and specifications:

- 500 Mating Cycles;
- Salt Spray Test Corrosion: 500 hours;
- Shock and Vibrations for Under-Car and Car-To-Car Applications;
- IP67 Sealing (Coupled Connectors);
- Fire Resistant and RoHS Compliant Materials.

Plug Connector

Receptacle Connector

Procedures Table

Description	Procedure
Electrical Characteristics	CEI EN 50124 and CEI EN 60077
Environmental Conditions	CEI EN 50125
Water Protection	CEI EN 60529
Shock and Vibration	CEI EN 61373
Corrosion Protection	VG 95210 - 2
Fire Protection	UNI CEI 1170 - 3
Mating Cycles	VG96929

Front Panel Mount Square Flange Receptacle
Assembly for Jacketed Cables

Application Notes:

- Front mount receptacle with backshell for jacketed cable. RoHS Compliant.
- Working voltage: 3000 Vcc. Test voltage: 12000 Vcc (1 min.).
- Water proof : IP67 level (coupled connectors).
- Contact resistance: 0.2 mOhm Max
- Temperature range: -55 +125°C.
- Contact: copper alloy with silver plating.
- Insulator: black thermoplastic resin according with UL94V0-NFF16-102:I2F1 (Exigency 4).
- Shells: Aluminium alloy with electrodeposited black paint.

ITS 500 Series Reverse Bayonet Single Pole Power Connector Assembly Instructions

ITS 500
Connectors

Plug Connector - Assembly Instructions

Items Description

- 1 - Plugshell
- 2 - Flat Washer
- 3 - Wave Spring
- 4 - Coupling Nut
- 5 - Front Insert
- 6 - Female Contact
- 7 - Rear Insert
- 8 - Backshell
- 9 - Compression Ring
- 10 - Grommet
- 11 - Backnut

Step 1

Cut and strip the cable

Step 2

Crimp the contact (6) on the wire.

Step 3

Insert the contact (6) crimped to the wire into the front insert (5). Install the rear insert (7) until it stops against the front insert (5) and check that the insert is assembled correctly per the picture above.

Step 4

Assemble the wave spring (3) and flat washer (2) into the coupling nut (4) and slide down over the plugshell (1). Screw the backshell (8) onto the rear external threads of the plugshell (1) and tighten. Make sure that the angle side of compression ring (7) are facing into the grommet. Then screw the backshell and tighten.
Electrical Test: Insulation resistance (5000 MΩ Min.). Test voltage: 3000 Vcc (1 min.).

Assembly Instructions

Receptacle Connector - Assembly Instructions

Items Description

- 12 - Receptacle
- 13 - Front Insert
- 14 - Male Contact
- 15 - Rear Insert
- 16 - Backshell
- 17 - Compression Ring
- 18 - Grommet
- 19 - Backnut

Step 1

Cut and strip the cable

Step 2

Crimp the contact (14) on the conductor.

Step 3

Insert the contact (14) crimped to the wire into the front insert (13). Install the rear insert (15) until it stops against the front insert (13) and check that the insert is assembled correctly per the picture above.

Step 4

Screw the backshell (16) onto the rear external threads of the receptacle (12) and tighten. Make sure that the angled side of the compression rings (17) are facing into the grommet (18). Then screw the backnut (19).

Electrical Test: Insulation resistance (5000 MΩ Min.). Test voltage: 3000 Vcc (1 min.).

Security Instructions

WARNING

**FAILURE TO FOLLOW THESE INSTRUCTIONS MAY RESULT IN DAMAGE TO EQUIPMENT,
SERIOUS PERSONAL INJURY OR EVEN DEATH.**

It is the user's responsibility to ensure these products are used safely. Glenair, Inc., including all Glenair, Inc. subsidiaries, is NOT responsible for damage to equipment, personal injury or death from use of Glenair, Inc. products.

Only qualified electrical technicians should use interconnection products in high voltage and other electrical conditions.

Interconnection products must be clean and dry when installed. Mating and de-mating should never occur under load.

Damaged interconnection products must be replaced immediately by a trained electrical technician.

Glenair, Inc. reserves the right to modify this Warning, any other warning, all catalogs, glenair.com website, and any other technical information with or without notice.

For further information and technical assistance, please contact your local Glenair Sales Office or see our website: **www.glenair.com**

V250 Train: An Albatross flying on the Dutch Railways

Glenair supplies connectors and interconnect systems for the V250 High Speed Trains which connect the cities of Amsterdam and Brussels. These trains are completely in conformity with the European Technical Specification of Interoperability—they can adapt to the different voltages of the various European railway networks.

V250 is an Italian family of tilting trains manufactured by AnsaldoBreda

V250 train combines the benefits of high-speed rail (travel times and service levels) with those of metropolitan travel (frequency and accessibility), providing competitive mobility solutions.

Also known as the Albatross, the V250 is a high-speed train to be built by AnsaldoBreda and styled by Pininfarina.

Designed to express speed, brightness, convenience and comfort, the V250 operates on the newly built HSL-Zuid in the Netherlands and its extension HSL 4 in Belgium.

The Albatross name is a reference to the top speed of the trains, 250 km/h. While this is slower than other high-speed trains, it is higher than the current top speed for Dutch trains of 140 km/h. The distinctive styling of the trains has sometimes been compared to a platypus!

Like Hercule Poirot, Glenair Solves Another One on the Orient Express

Glenair application engineers, every bit the intellectual match for retired Belgian detective Hercule Poirot, were asked to solve not a crime, but a serious problem involving an emergency braking system upgrade on the Orient Express. A complicated interplay of hydraulics, pneumatics and mechanics, the braking system solution had to fit within very limited space, and the train is, of course, a much-revered and valuable historical artifact.

The case was solved with Glenair ITS reverse bayonet connector cables and flange mount receptacles. Plugs with cable clamp backshells mated to receptacles mounted on existing metal junction boxes, along with a specially-designed, corrosion-free and EMI/RFI-protected Glenair Composite Junction Box, factory wired to an internal termination block. Glenair engineered a solution to a modern braking system problem, fully integrated into a historical train.

IC4 Train : Low Emission Diesel Engine with Common Rail Injection

The IC4 is an inter-city train built by Italian AnsaldoBreda for the trans-Great Belt routes of Danske Statsbaner (DSB), Denmark's national railway operator. Glenair is one of the main suppliers of Connectors and Interconnection Systems for this train.

UJ Series Connector Introducing the Power Joint System

UJ1 AND UJ2 POWER JOINT CONNECTION SYSTEM

Offers the possibility to connect medium and high power cables without the need for bulky junction boxes. The UJ Power Joint System offers the same environmental protection with substantial size and weight savings.

Alternative to Junction Boxes!

Dimension Reduction!

	UJ Series 	Junction Box 
Dimensions	Small	Regular / Big
Weight	Light	Heavy
Protective Varnish	No	Yes
Modularity	Yes	No
Environmental	Yes	Yes
Electrical Performance	Yes	Yes
Cost Reduction	Yes	No
Temperature Range	High	Standard

CRIMP TERMINAL BLOCKS

UJ Series is a “Joint” connector: 2 - 3 minutes for mating and unmating, but is really reliable and efficient for Power Applications in harsh conditions.

Phase 1

Crimp Terminal Blocks, assembled with a screw easy and suitable for field assembly.

**Phase 2**

Positioner protects Terminal Blocks and maintain the correct contact position into the middle of the Plastic Body.

CRIMP TERMINAL BLOCKS

Phase 3

Tightness Clamping system both sides.

Phase 4

Complete Connector

Internal Section

D

CLAMP DETAILS

The symmetric clamping system keeps the cable firmly locked and in axis with cables. The rounded shape on the clamping system and on the termination, allow to avoid cable's insulator damaging in the clamping zone and in the rear end despite casual movements.

UJ Series Connector

How to Order • Part Number Breakdown

UJ 1 CONNECTOR CHARACTERISTICS

Single Connector weight: 900.0 gr

APPLICATION NOTES:

- 1 - In line junction with polymeric based body and metal strain relief parts RoHS compliant
- 2 - Crimp contacts face-face coupling with screw locking
- 3 - Arrangement: Single pole
- 4 - Contacts: hermaphrodite crimp contacts face-face coupling with screw locking
- 5 - Working voltage: 3'500 Vac RMS/Vdc
- 6 - Test voltage: 12'000 Vac RMS
- 7 - Working temperature: (-40 to +150)°C
- 8 - Water proof: IP 67 level (coupled connectors)
- 9 - Max. contact resistance: $\leq 0.5 \text{ m}\Omega$
- 10 - Contacts: copper alloy with silver plating (G10) - Phasing System available
- 11 - Gaskets: silicone rubber
- 12 - Cable clamp: aluminum alloy (cable clamp) with electrodeposited black paint
- 13 - Plastic parts: black thermoplastic resin (body)
- (UL 94: V0; NFF 16-102: I2F2 exigence 3; BS; ASTM; UNI-CEI11170)
- 14 - Screws: stainless steel.
